About Alpha Cognition Inc. – Alpha Cognition Inc. (ACI) is engaged in neurological disease research and has developed programs in Alzheimer’s Disease and amyotrophic lateral sclerosis (ALS).

- Alpha-1062 is a patented new chemical entity that has shown efficacy in preclinical and recently completed human clinical trials. It is being developed as a new generation acetylcholine esterase inhibitor (AChEI) with minimal gastrointestinal side effects and new routes of administration. Alpha-1062’s active metabolites are differentiated from donepezil and rivastigmine in that they may sensitize neuronal nicotinic receptors, most notably the alpha-7 subtype, which is known to have a positive effect on cognition.
- Alpha-602 (Progranulin) is a natural protein that is expressed in several cell types in the central nervous system and in peripheral tissues. Alpha-602 regulates cell survival and certain inflammatory processes. The protein plays a major role in regulating lysosomal function and microglial responses to disease. Its use in the treatment of ALS has been patented by ACI.
